ABOUT

DizitalAdda

DizitalAdda was founded by Mr. Gulshan with a powerful vision—to empower individuals in the digital era by creating skilled employees and entrepreneurs. With a deep commitment to quality education, DizitalAdda ensures that every student receives in-depth training in the digital industry, preparing them for real-world challenges.

At DizitalAdda, every student is considered family. We understand the value of time and hard-earned money, and our goal is to provide practical, result-oriented learning. Over the past 12 years, we have set a remarkable milestone, successfully training over 25,000 students through both online and offline programs across four countries.

Our student community is diverse, including:

25% freshers (Class 12th & graduates)

30% business owners & professionals

30% housewives

15% others

DizitalAdda is recognized for its high-quality training, offering certifications from Digital India, Skill India, and Google Partners. Our programs include paid internships, 100% Placement Support, business collaborations, and mentorship opportunities.

With an excellent 4.9-star rating on Google, DizitalAdda continues to be a trusted name in Artificial Intelligence, shaping the future of aspiring professionals worldwide.

25000+ : Trusted Students

30+ : AI Tools

Mr. Gulshan Kumar

Founder

(DizitalAdda)

“Most Promising Brand” IN ARTIFICIAL INTELLIGENCE TRAINING

MISSION

At DizitalAdda, our mission is to empower individuals with advanced Generative AI and Prompt Engineering expertise, equipping them with the skills to analyze complex data, develop intelligent models, and drive innovation. We aim to bridge the gap between technical education and industry applications by offering expert-led training, hands-on projects, and real-world AI solutions. Through continuous learning and practical application, we prepare professionals to harness machine learning, deep learning, and data-driven decision-making, enabling them to make a significant impact in the evolving digital economy.

VISION

DizitalAdda envisions a future where Data Science and AI empower individuals to become analytical thinkers, problem solvers, and technology innovators. Our goal is to democratize AI education by delivering high-quality, practical training that aligns with industry demands. We strive to create experts who can leverage data science methodologies, automate processes, and develop AI-driven strategies to reshape industries. By fostering a culture of mentorship, research, and applied learning, we ensure that every learner gains financial independence, career growth, and the ability to pioneer AI-driven advancements. Our vision is to be a global leader in Data Science and AI education, shaping the next generation of professionals ready to transform the digital landscape.

WHO IS THIS PROGRAM FOR?

Professionals

DizitalAdda is India's most recommended skill based institute, offering expert training in Artificial Intelligence, Data Learning and more.

Business Owner

DizitalAdda provides essential Artificial Intelligence skills to help business owners grow their brands online, enhance visibility, and boost sales.

Students

A perfect opportunity for students to gain industry-relevant Artificial Intelligence skills, making them job-ready and future-proofing their careers.

Career Switchers

Transition into a rewarding Artificial Intelligence career with practical knowledge, hands-on training, and expert mentorship at DizitalAdda.

Freelancers

Unlock new income opportunities by mastering Artificial Intelligence skills to attract clients, grow your personal brand, and work independently.

Start-Ups

Empower your startup with Artificial Intelligence expertise to scale your business, enhance online presence, and generate more leads effectively.

COURSES

WE TRAIN

DGAI&PE

**DIPLOMA IN GEN AI
& PROMPT
ENGINEERING**

AGAI&PE

**ADVANCED
CERTIFICATION IN GEN
AI & PROMPT
ENGINEERING**

Course 1 : Diploma In Gen AI & Prompt Engineering

Duration : 12 Months

Structure :

- Master the art of prompt engineering and generative AI with hands-on tools like ChatGPT, Midjourney, and DALL·E.
- The course includes AI fundamentals, advanced prompt design, real-world projects, and industry-relevant certifications.

Course 2 : Advanced Certification In Gen AI & Prompt Engineering

Duration : 6 Months

Structure :

- Dive deep into advanced prompt strategies, AI tools, and automation workflows for real-world applications.
- Covers LLM concepts, image/video generation, chatbot building, and portfolio-based project training.

DGAI&PE – DIPLOMA IN GEN AI & PROMPT ENGINEERING

12 MONTHS COURSE

MONTH 1: AI FOUNDATIONS & SETUP

Week 1: AI Foundations + Business Applications

- Basics of AI, ML, DL, GenAI ecosystem
- Real-world AI use cases across industries
- Types of AI tools and their business purpose
- Introduction to Large Language Models
- Fundamentals of Prompt Engineering
- AI ethics and responsible AI practices

Hands-on Implementation

- Interactive sessions with AI tools for business content generation
- Exploring Perplexity.ai for industry analysis
- AI dashboard exploration showing real-time applications
- Generate comprehensive AI roadmap for one industry vertical
- Compare different LLM outputs for same prompts

Week 2: Development Environment Setup + AI Tools for Business

- Complete IDE setup (VS Code, extensions, themes)
- Jupyter Notebook and Google Colab mastery
- Git/GitHub workflow and version control
- Professional LinkedIn and Kaggle profile creation
- AI for email automation and personalization strategies
- AI-driven lead generation and CRM integration
- Prompt design principles for business writing

Hands-on Implementation

Set up complete development environment
Create GitHub repository with proper documentation
Generate custom email sequences using ChatGPT
Use Lyne.ai and Flowrite for automated follow-ups
Create LinkedIn posts and ad headlines with Copy.ai
Design business proposals and resumes with Notion AI
Build cold email lists using AI-driven tools

Week 3: AI Content Creation Pipeline

Presentation generation from raw concepts
Video creation workflows from text prompts
AI-powered course design methodologies
Blog optimization and topic clustering techniques
Advanced storytelling prompt frameworks

Hands-on Implementation

Generate professional slide decks using Gamma
Create video content using Pika and InVideo AI
Develop blog summaries and social media adaptations
Design a complete 3-module micro-course using CourseAI
Build automated content calendar for social platforms

Week 4: AI Agents & No-Code Automation

Understanding AI agents architecture and functionality
No-code platforms deep dive (Flowise, Zapier, Bubble)
Chatbot logic: context management, memory, conversation flow
AI-powered web application development
Real-world agent applications (HR, Study planning, Travel assistance)

Hands-on Implementation

Build intelligent customer FAQ chatbot

Create Zapier automation workflows

Develop smart web application using Bubble

Customize Flowise agent for recommendation systems

Integration testing and deployment

MONTH 2: PYTHON FOR AI

Week 5-6: Python Programming

Basic Python

List , tuple , array , dictionary

Error Handling and Debugging

File I/O and Data Serialization

Python Libraries Overvie

Hands-on Implementation

Build a Personal Finance Tracker

Create Data Processing Scripts

Week 7-8: Data Science Fundamentals

NumPy for Numerical Computing

Pandas for Data Manipulation

Matplotlib/Seaborn for Visualization

Statistics for AI

Hands-on Implementation

Exploratory Data Analysis Project

Data Cleaning and Preprocessing

MONTH 3: MACHINE LEARNING FOUNDATIONS

Week 9-10: ML Algorithms & Implementation

Supervised vs Unsupervised Learning
Regression, Classification, Clustering
Model Evaluation Metrics
Cross-validation and Hyperparameter Tuning

Hands-on Implementation

Implement ML algorithms from scratch
Scikit-learn hands-on practice
Model selection and evaluation

Week 11-12: Deep Learning Basics

Neural Networks Architecture
Backpropagation and Optimization
Activation Functions and Loss Functions
Introduction to TensorFlow/PyTorch

Hands-on Implementation

Build Neural Networks from scratch
Image classification with CNNs
Text processing with basic RNNs

MONTH 4: NATURAL LANGUAGE PROCESSING & TRANSFORMERS

Week 13-14: NLP Fundamentals

Text Preprocessing and Tokenization
Word Embeddings (Word2Vec, GloVe)
Traditional NLP Tasks
Introduction to Transformers

Hands on Implementation

Text preprocessing pipeline
Sentiment analysis implementation
Named Entity Recognition

Week 15-16: Transformer Architecture Deep Dive

Attention Mechanism
Transformer Architecture (Encoder-Decoder)
BERT, GPT Architecture
Pre-training vs Fine-tuning

Hands-on Implementation

Implement attention mechanism
Fine-tune BERT for classification
Text generation with GPT models
Hugging Face Transformers library

MONTH 5: INTRODUCTION TO GENERATIVE AI

Week 17-18: Generative Models Overview

Types of Generative Models
Autoregressive Models
Variational Autoencoders (VAEs)
Generative Adversarial Networks (GANs)
Diffusion Models

Hands-on Implementation

Implement simple GAN
Text generation with RNNs
Image generation experiments
Compare different generative approaches

Week 19–20: Large Language Models (LLMs)

Evolution of Language Models

GPT Family (GPT-1 to GPT-4)

Other LLMs (Claude, Llama, PaLM)

Model Architecture and Training

Hands-on Implementation

API integration with OpenAI, Anthropic

Basic text generation tasks

Model comparison and evaluation

Understanding model limitations

MONTH 6: PROMPT ENGINEERING MASTERY

Week 21–22: Fundamentals of Prompt Engineering

What is Prompt Engineering?

Types of Prompts (Zero-shot, Few-shot, Chain-of-thought)

Prompt Design Principles

Common Prompt Patterns

Hands-on Implementation

Design effective prompts for various tasks

A/B testing prompts

Prompt optimization techniques

Building prompt libraries

Week 23–24: Advanced Prompting Techniques

Chain-of-Thought Prompting

Tree of Thought

Self-Consistency

Constitutional AI Principles

Prompt Injection and Safety

Hands-on Implementation

- Implement complex reasoning chains
- Build multi-step problem solvers
- Create safe and robust prompts
- Prompt evaluation frameworks

MONTH 7: LANGCHAIN & AI APPLICATION DEVELOPMENT

Week 25–26: LangChain Fundamentals

- LangChain Architecture
- Chains, Agents, and Memory
- Document Loaders and Text Splitters
- Retrieval Augmented Generation (RAG)

Hands-on Implementation

- Vector Databases and Embeddings
- Advanced RAG techniques
- Agent Types and Tools
- LangChain Expression Language (LCEL)

Week 27–28: Advanced LangChain & RAG Systems

- Vector Databases and Embeddings
- Advanced RAG techniques
- Agent Types and Tools
- LangChain Expression Language (LCEL)

Hands-on Implementation

- Build production RAG systems
- Create AI agents with tools
- Implement advanced retrieval strategies
- Performance optimization

MONTH 8: VECTOR DATABASES & EMBEDDINGS

Week 29–30: Vector Databases Deep Dive

- Vector Search and Similarity
- Embedding Models and Techniques
- Vector Database Options (Pinecone, Chroma, Weaviate)
- Indexing and Search Optimization

Hands-on Implementation

- Set up vector databases
- Generate and store embeddings
- Implement semantic search
- Compare different embedding models

Week 31–32: Advanced Embedding Techniques

- Fine-tuning Embedding Models
- Multi-modal Embeddings
- Hybrid Search Strategies
- Embedding Evaluation Metrics

Hands-on Implementation

- Fine-tune embeddings for domain-specific tasks
- Build multi-modal search systems
- Implement hybrid retrieval
- Embedding quality assessment

MONTH 9: MULTI-MODAL AI & ADVANCED APPLICATIONS

Week 33-34: Computer Vision & Image Generation

- Convolutional Neural Networks
- Image Generation Models (DALL-E, Midjourney, Stable Diffusion)
- Vision-Language Models (CLIP, BLIP)
- Image-to-Text and Text-to-Image

Hands-on Implementation

- Image classification and object detection
- Text-to-image generation
- Image captioning systems
- Visual question answering

Week 35-36: Multi-modal Applications

- Vision-Language Understanding
- Audio Processing and Speech
- Video Analysis and Generation
- Multi-modal RAG Systems

Hands-on Implementation

- Build multi-modal chatbots
- Implement speech-to-text systems
- Create video analysis tools
- Design multi-modal interfaces

MONTH 10: AI APPLICATION DEPLOYMENT & MLOPS

Week 37–38: Model Deployment Strategies

- Deployment Architectures
- API Design and Development
- Containerization with Docker
- Cloud Deployment (Github Action / Hugging Face)

Hands-on Implementation

- Deploy models as REST APIs
- Create web interfaces with Streamlit
- Containerize AI applications
- Set up cloud infrastructure

Week 39–40: MLOps and Production Systems

- MLOps Principles and Practices
- Model Versioning and Monitoring
- A/B Testing for AI Systems
- Performance Monitoring and Logging

Hands-on Implementation

- Implement CI/CD for AI projects
- Set up model monitoring
- Create automated testing pipelines
- Build production-ready systems

MONTH 11: MAJOR PROJECT DEVELOPMENT

Week 41-42: Capstone Project Planning

Enterprise AI Assistant: Multi-functional business assistant with RAG

AI-Powered Learning Platform: Personalized education system

Creative AI Studio: Multi-modal content creation platform

Industry-Specific AI Solution: Healthcare, Finance, or E-commerce AI

Hands-on Implementation

Project planning and architecture design

Technology stack selection

Database and infrastructure setup

Initial development and prototyping

Week 43-44: Project Implementation

Core functionality development

Advanced feature implementation

Integration testing and debugging

Performance optimization

User interface development

Hands-on Implementation

Complete end-to-end AI application ready for portfolio

MONTH 12: CAREER PREPARATION & PROFESSIONAL DEVELOPMENT

Week 45–46: Portfolio & Resume Building

Activities

- GitHub profile optimization
- Project documentation and demos
- Technical blog writing
- LinkedIn profile enhancement
- AI/ML resume templates
- Achievement-focused descriptions
- Skill assessment and gap analysis
- Industry-specific resume variations

Week 47–48: Interview Preparation & Placement

Activities

- AI/ML concept review
- Coding problem solving
- System design for AI applications
- Case study presentations
- Comprehensive Interview Training
- Aptitude Tests: Logical reasoning, quantitative analysis
- Coding Rounds: Python programming, algorithm implementation
- Technical Interviews: AI concepts, project discussions
- HR Rounds: Behavioral questions, salary negotiation
- Personality Development
- Communication skills enhancement
- Professional presentation skills
- Industry networking strategies
- Continuous learning mindset

AGAI&PE – ADVANCED CERTIFICATION IN GEN AI & PROMPT ENGINEERING

6 MONTHS COURSE

MONTH 1: AI FOUNDATIONS & SETUP

Week 1: AI Foundations + Business Applications

Basics of AI, ML, DL, GenAI ecosystem
Real-world AI use cases across industries
Types of AI tools and their business purpose
Introduction to Large Language Models
Fundamentals of Prompt Engineering
AI ethics and responsible AI practices

Hands-on Implementation

Interactive sessions with AI tools for business content generation
Exploring AI tools for industry analysis
AI dashboard exploration showing real-time applications
Generate comprehensive AI roadmap for one industry vertical
Compare different LLM outputs for same prompts

Week 2: Development Environment Setup + AI Tools for Business

Complete IDE setup
Jupyter Notebook and Google Colab mastery
Git/GitHub workflow and version control
Professional LinkedIn and Kaggle profile creation
AI for email automation and personalization strategies
Prompt design principles for business writing
Shopping, Stores, Google Chat, Classrooms etc.

Hands-on Implementation

- Set up complete development environment
- Create GitHub repository with proper documentation
- Generate custom email sequences using ChatGPT
- Create LinkedIn posts and ad headlines with AI tools
- Design business proposals and resumes with AI assistance
- Build professional profiles on LinkedIn and Kaggle

Week 3: AI Content Creation Pipeline

- Presentation generation from raw concepts
- AI-powered content creation methodologies
- Blog optimization and topic clustering techniques
- Advanced storytelling prompt frameworks
- Social media content automation

Hands-on Implementation

- Generate professional slide decks using AI tools
- Create blog content and social media posts
- Develop automated content calendar
- Build comprehensive content creation workflow
- Design marketing materials using AI

Week 4: AI Agents & Basic Automation

- Understanding AI agents architecture and functionality
- No-code platforms introduction
- Basic chatbot logic and conversation flow
- Simple automation workflows
- Real-world agent applications

Hands-on Implementation

- Build intelligent customer FAQ chatbot
- Create basic Zapier automation workflows
- Develop simple AI-powered tools
- Integration testing and basic deployment
- Documentation and version control

MONTH 2: PYTHON FOR AI DEVELOPMENT

Week 5-6: Python Programming Essentials

- Python syntax and basic programming concepts
- Data types: Lists, tuples, dictionaries, sets
- Control structures: loops, conditionals
- Functions and modules
- Error handling and debugging
- File I/O operations
- Python libraries overview

Hands-on Implementation

- Build a Personal Finance Tracker
- Create Data Processing Scripts
- Develop utility functions for AI projects
- Practice with real-world coding challenges
- Build reusable code modules

Week 7-8: Data Science with Python

- NumPy for numerical computing
- Pandas for data manipulation and analysis
- Matplotlib/Seaborn for data visualization
- Basic statistics for AI
- Data cleaning and preprocessing
- Working with CSV, JSON, and other data formats

Hands-on Implementation

- Exploratory Data Analysis projects
- Data cleaning and preprocessing pipelines
- Create interactive visualizations
- Build data analysis reports
- Work with real business datasets

MONTH 3: MACHINE LEARNING FOUNDATIONS

Week 9–10: Introduction to Machine Learning

- What is Machine Learning ?
- Types of ML: Supervised, Unsupervised, Reinforcement Learning
- Basic algorithms: Linear Regression, Decision Trees, K-Means
- Model evaluation metrics (Accuracy, Precision, Recall)
- Train-test split and cross-validation
- Introduction to Scikit-learn

Hands-on Implementation

- Build first ML model & Implement classification tasks
- Implementation of Email Spam Classification
- Model comparison and evaluation
- Visual model performance analysis

Week 11–12: Deep Learning Basics

- Introduction to Neural Networks
- Basic concepts: neurons, layers, activation functions
- Introduction to TensorFlow/Keras (basic usage)
- Simple neural network architectures
- Training and evaluation of neural networks
- Overfitting and regularization basics

Hands-on Implementation

Build a simple neural network from scratch
Image classification with basic CNN
Text classification with simple models
Compare traditional ML vs Deep Learning
Visualize neural network training

MONTH 4: NATURAL LANGUAGE PROCESSING & LLMs

Week 13–14: NLP Fundamentals

Introduction to Natural Language Processing
Text preprocessing: tokenization, cleaning, normalization
Bag of Words and TF-IDF
Sentiment analysis basics
Named Entity Recognition (NER)
Introduction to word embeddings

Hands-on Implementation

Build text preprocessing pipelines
Create sentiment analysis tool
Implement basic chatbot
Text classification projects
Word cloud and text visualization

Week 15–16: Introduction to Transformers and LLMs

What are Transformers? (High-level overview)
Introduction to BERT and GPT models
Understanding pre-trained models
Hugging Face Transformers library
Fine-tuning basics (concept level)
API integration with popular LLMs

Hands-on Implementation

- Use pre-trained models for text classification
- Integrate OpenAI API for text generation
- Build simple question-answering system
- Compare different LLM outputs
- Create text summarization tool

MONTH 5: PROMPT ENGINEERING & AI APPLICATIONS

Week 17–18: Prompt Engineering Fundamentals

- What is Prompt Engineering?
- Types of prompts: Zero-shot, Few-shot, Chain-of-thought
- Prompt design principles and best practices
- Common prompt patterns and templates
- Prompt optimization techniques
- A/B testing for prompts

Hands-on Implementation

- Design effective prompts for various tasks
- Build prompt template library
- Create prompt optimization workflows
- Implement A/B testing for prompts
- Develop prompt evaluation metrics

Week 19–20: Advanced Prompting & LangChain Basics

- Chain-of-Thought prompting
- Role-based prompting
- Constitutional AI principles
- Introduction to LangChain
- Basic chains and agents
- Document processing with LangChain

Hands-on Implementation

- Implement complex reasoning chains
- Build multi-step problem solvers
- Create document Q&A systems
- Develop basic LangChain applications
- Build conversational AI agents

Week 21-22: RAG Systems & Vector Databases

- Introduction to Retrieval Augmented Generation (RAG)
- Vector databases concepts (Chroma, FAISS)
- Embeddings and semantic search
- Document loaders and text splitters
- Basic RAG implementation
- Evaluation of RAG systems

Hands-on Implementation

- Build basic RAG system
- Implement semantic search
- Create document chat interface
- Set up vector databases
- Develop knowledge base systems

Week 23-24: AI Application Development

- Building AI-powered web applications
- Streamlit for rapid prototyping
- Gradio for ML model interfaces
- API development basics
- User interface design for AI apps
- Basic deployment strategies

Hands-on Implementation

Create AI web applications with Streamlit

Build model interfaces with Gradio

Develop API endpoints for AI models

Design user-friendly AI interfaces

Deploy applications to cloud platforms

MONTH 6: Advanced Applications & Career Preparation

Week 25–26: Multi-modal AI Applications

Introduction to Computer Vision

Text-to-Image generation

Image-to-Text applications

Basic audio processing

Multi-modal AI applications

Integration of different AI modalities

Hands-on Implementation

Build image classification systems

Create text-to-image applications

Develop image captioning tools

Implement basic audio processing

Create multi-modal AI interfaces

Week 25–26: Major Project

AI-Powered Content Creation Suite - Multi-modal content generation platform

Intelligent Customer Support System - RAG-based chatbot with multi-format support

Personal AI Assistant - Voice and text-based assistant with multiple capabilities

Industry-Specific AI Solution - Healthcare, Education, or E-commerce focused AI tool

Hands-on Implementation

Project planning and architecture design
Technology stack selection and setup
Core functionality development
User interface development
Testing and optimization

Week 27-28: Portfolio Building & Career Preparation

GitHub profile optimization
Project documentation and demos
Technical blog writing
LinkedIn profile enhancement
Resume building for AI roles

Hands-on Implementation

Python programming practice
System design basics for AI applications
Project presentation skills
Technical Interviews Preparation

MASTER AI TOOLS FOR THE FUTURE OF WORK

In today's rapidly changing world, our program equips you with the practical skills you need to succeed. We go beyond theory, diving deep into the latest AI tools that are transforming industries. Learn to leverage this powerful technology and gain a competitive edge in the job market.

Unleashing AI's Potential: The Power of Prompt Engineering

Prompt engineering empowers users to become co-pilots with AI, navigating its capabilities to achieve remarkable results. As AI continues to evolve, prompt engineering will become an essential skill, unlocking its full potential and shaping the future of human-AI collaboration. It's a game-changing feature that unlocks the true potential of AI by allowing users to fine-tune their interactions and achieve more precise, relevant outputs.

WHAT OUR STUDENTS SAY

DizitalAdda offers top-notch AI , ML , GenAI training with expert corporate trainers. Highly recommended.

Great institute with top-quality education, practical exposure, and expert trainers. Loved the experience.

Best institute for AI Quality education, real-world training, and a great corporate vibe.

Corporate-level training with advanced tools and real projects. Best place to master Artificial Intelligence.

The trainers at DizitalAdda are industry experts. The corporate-style learning is a game-changer.

DizitalAdda bridges the gap between theory and practice. The corporate learning style is outstanding.

DizitalAdda provides excellent hands-on training with live projects. Perfect for career growth.

I got hands-on experience with AI Best place to start a Artificial Intelligence career.

The corporate environment at DizitalAdda makes learning Artificial Intelligence feel like real industry work.

DizitalAdda provides a real corporate feel with interactive sessions and live projects. Highly recommended.

Best place to learn AI Corporate trainers provide deep insights into real-world strategies.

Perfect learning experience! Industry-focused curriculum, expert trainers, and great mentorship.

DizitalAdda structured course and practical learning helped me land my first AI job.

Best decision to join DizitalAdda! Quality training, corporate atmosphere, and real-world case studies.

STUDENT REVIEWS

Jyoti Prajapati
3 reviews

★★★★★ 7 months ago

If you've just completed your 12th and are confused about what to do next, go for this AI course. It covers everything – Python, Machine Learning, and AI tools – all in detail and in a beginner-friendly way.

Farman Khan
3 reviews · 1 photo

★★★★★ 3 weeks ago **NEW**

The best part is the classes are never boring. They use interactive teaching and even offer career guidance and placement prep sessions. It's not just learning; it's career shaping.

Adil Khan
2 reviews · 3 photos

★★★★★ 7 months ago

I used to think AI was only for coding experts. DizitalAdda proved me wrong! The course is so beginner-friendly with great assignments and proper mentorship. I never thought I'd enjoy learning AI this much.

Kumkum Sharma
2 reviews

★★★★★ a week ago **NEW**

Coming from a small town, I didn't have access to quality resources. DizitalAdda's online + offline support gave me a chance to learn AI from scratch and actually build a future. Can't thank them enough!

Ashok Gupta
1 review

★★★★★ 3 weeks ago **NEW**

When I joined DizitalAdda, I had zero experience with coding or AI. But the way they teach — step-by-step with real examples — made everything click. I actually built my first AI model last month. So proud of this journey!

I always wanted to explore AI but didn't know where to start. DizitalAdda made everything so easy to understand from scratch. The instructors were super helpful, and the concepts were explained in the simplest way. Totally recommend it!

Pinki Nagpal
1 review

★★★★★ 2 months ago

After passing 12th, I was looking for a course that's future-ready. I'm glad I joined the AI course at DizitalAdda. It's the right mix of theory and hands-on practice. The support and guidance are just amazing. Loved it!

Shambhavi Jha
1 review

★★★★★ a month ago

The course content is very updated and practical. I learned a lot. Only suggestion – some videos could be better in quality. Other than that, everything was top-notch.

khushboo dubey

★★★★★ a month ago

I didn't just learn about AI — I actually built real projects. That's the best part of DizitalAdda's AI course. Now I feel ready to apply for internships in AI and ML. Huge thanks to the mentors!

Rahul Nagpal
1 review

★★★★★ 2 months ago

I don't come from a tech background, but still, I never felt left out. The mentors explained everything patiently, and the live doubt-clearing sessions helped a lot. Best learning experience ever!

Rakesh Kumar
1 review

★★★★★ 4 months ago

At first, I thought the course fee was a bit much, but after completing it, I can say it was worth every rupee. The certification added a lot of value to my CV and confidence.
